NOX
PROGRAMMING

ABOUT

Nox programming is a software engineering company **building dedicated development teams and providing business automation solutions and support.**

We work as the extension of these companies to develop and scale beautiful software products that delight users and disrupt markets.

We have **a startup mindset and product-centric mentality.** Nox programing was founded by a team of dreamers that drives significant cost savings, eliminates engineer recruiting challenges and takes a next-gen approach to collaboration that mimics an in-person experience and makes working with an offshore team easier than ever before.

OUR VALUES

**Quality** **Integrity** **Teamwork** **Creativity** **Fun**

We believe that the best businesses and teams are built by professionals who are interested and involved in what they are doing, which is why we are very selective and onboard every new person with attention and care.

TECHNOLOGIES / TOOLS

In NOX, we prefer to use only **modern** and **cutting-edge** technologies for making our clients' business more efficient and helping them to reach their business goals.

- Typescript

Back end

- Node js
- Python
- .Net
- Ruby on Rails
- Java

Mobile

- React Native
- Flutter

Dev-ops

- Azure
- AWS

Quality assurance

Services

Custom Software Development

Nox as the tech partner deals with various engagement scenarios. Even if a customer has just an 'idea on a napkin', without clearly defined requirements or business goals, the right technology partner will help to prove its viability before the successful implementation.

Our responsibility areas as a technology partner include building/reviewing solution architecture, software development, advising on optimal tech stack and integration, IT infrastructure analysis, and security/privacy audit.

Nox is providing quality knowledge sharing if needed — education and training.

Consulting

We're not just about IT consulting and recruitment – we're your partners in meeting your business needs. Whether you're navigating the tech landscape or building your dream team, we've got the expertise and personal touch to make it happen. Let's collaborate and turn your business goals into a success story.

Dedicated Teams

Clients share with Nox precise info on what they expect from the software product or service; how many professionals are requested for working on the project; and which technological preferences they have.

The more comprehensive these entry points are, the more efficient and well-matched embedded resources the software development provider suggests.

It's up to the customer to choose special aspects of this engagement model's project management and define whether they will manage the dedicated team themselves or involve a project manager from the vendor's side. As a rule, embedded resources work alongside in-house specialists, interact with the internal team, and augment it, while being located on the premises of the service provider's office.

Support

In today's competitive market, providing exceptional product support is not just a business strategy; it's a cornerstone of customer satisfaction. At Nox Programming, we take immense pride in our commitment to delivering top-notch support to our valued customers.

Rates

In Nox we believe that everything must be effective, even the prices. Check out our development rates and you will pleasantly surprised:

	Hourly Involvement:	**Monthly Involvement:**
Middle Specialist: with 4+ years of experience	started from 40$	started from 6.720$

Lead Specialist: with 8+ years of experience	started from 60$	started from 10.080$

Cases

ZIDI

Our challenge was to update the legacy mobile application in accordance with current software product development standards. Without changing the current structure and functionality of the application.

The result:
Through close cooperation with the client and his business goals we managed to update the application and relaunch it in the market in the short amount of time.

Technology:

Ruby on Rails, React Native, AWS, Postmark, Firebase,

Cases

B2B Food Marketplace [under NDA]

One of our clients approached us with request for developing a solution for a B2B food marketplace for international operations. After careful review of his technical and business requirements we came up with a solution of a simple headless marketplace and mobile application for simplified communication between vendor and customer.

The result:

By taking a deep dive into the client's needs we managed to deliver an MVP solution consisting of a web and mobile application for new business proof of concept.

Technologies:

PHP, React Native, AWS, FIrebase

Cases

Dedicated Development Team for Start-up

One of our clients approached us with request for building the remote development team for their star-up needs. In 1 week Nox team has assembled a pool of candidates in alignment with the client's request.

The result:

Our client got the development team in short amount of time.
