PROFESSIONAL DATA AND TECHNOLOGY SERVICES

Your Data Analytics Experts

In our team we have years of experience across multiple industries to deliver scalable solutions that will streamline your business process, enhance your efficiency and drive real business value.

We work closely with all our clients to determine their individual needs. That is why our solutions are designed for the unique problems you might face. Let us help you reimagine your business with the latest technologies to get ahead of the curve and move your business forward.

Data and Why Hire Data Experts?

Data Control
Humans create as much information every 2 days as from the beginning of time until 2003.

Data Experts
Our data-driven solutions are built from experience and our partnerships with industry leaders.

Data Storage
The total amount of data being captured and stored by industry doubles every 1.2 years.

Data Creation
Data Management is crucial as over 90% of all the data in the world was created in the past 4 years.

Data's contribution to business success continues to increase. However, unless this data can be transformed into actionable insights, business will not receive the information needed to uncover new business opportunities and fuel innovation. The data platform provides the mission-critical infrastructure that forms the foundation upon which such innovation is built.

How does it benefit Business?
Organisations have become data-centric entities with a huge dependency on IT systems and related platforms. Typically, we see operations in a company coming to a halt when the IT systems or supporting database platforms becomes unavailable.

Information Centric, Data Platform

Our Data Driven Solutions

Data Platform Modernisation

Modernising your data platform includes full migration to Azure, hybrid Modern Data Architectures or just ensuring you benefit from the latest enhancements within the latest version of Microsoft SQL Server. Following best practice design principles to ensure optimal platform availability, and to unlock the value of your data assets. Build a secure data foundation and cloud architecture that can harness data for a deeper view into the organisation to meet current needs flexibly to scale for the future.

Data Analytics Solutions

Our specialized and comprehensive Business Intelligence (BI) and Analytics services provide a foundation for insight and analysis to help you make more insightful business decisions.

Enterprise Data Warehousing

Let us design and build a data warehouse (DW or DWH), also known as an enterprise data warehouse (EDW) that is used for reporting and data analysis and is considered a core component of business intelligence. DWs are central repositories of integrated data from one or more disparate sources. They store current and historical data in one single place that can be used for creating analytical reports throughout the enterprise.

Data Engineering

Assisting with your end-to-end data platform and analytics strategy, design, build and maintenance. Let our skilled team be an extension of your IT department that handles all day-to-day activities in allowing you to focus on core business functions.

Data Integration and Architecture

Our specialised team can help transform structured and unstructured data and deliver it to any system.
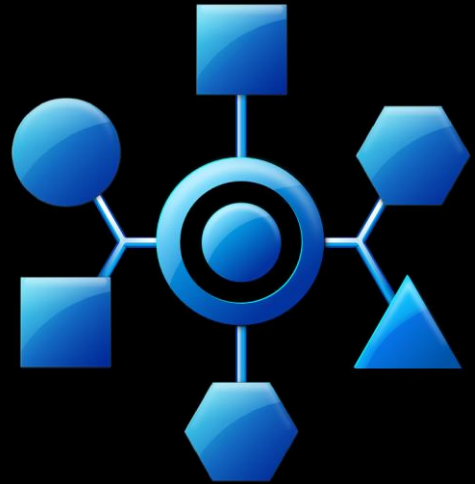

Data Modelling and Visualisation

Data modelling is a process used to define and analyse data requirements needed to support the business processes combined with powerful data visualisation using tools like Power BI.

Our Engagement Models

Expert Assistance
Consulting and Advisory Services

Providing our clients with expert advice on best practice with regards to the management and implementation of Data Analytics and Modern Data Warehouse. These engagements are high-level and might not be lengthy engagements. This engagement is usually based on a time-and-material basis.

Business Management
Managed Services and Outsource Model

Instead of clients having an inhouse function with senior architects and developers, designing and implementing data analytics solutions, a managed service offering is proposed by augmenting your internal team with our resources for a set contract duration.

Maximised Efficiency
Project and Product Based Engagements

Once a clearly defined scope has been established, a project team can be assembled to provide the agreed deliverables. These engagements will typically have a defined start and end date at the inception of the engagement. These engagements are typically based on a set price for the deliverables and requires extensive project management.
